

XMOS would like to invite you to meet with us at CES in Las Vegas (January 7-10, 2014). We'll be demonstrating our latest solutions to help you deliver high quality, differentiated audio products, discussing our latest multicore microcontroller offerings, and looking ahead to our plans for 2014 and beyond.

XMOS: helping you to sound better

CES 2014 will be the first public demonstration of our Multi-Function Audio (MFA) Platform. Leveraging technology already in use at the heart of products from leading audiophile brands including Sony, the MFA reference platform makes it easy for you to quickly create great-sounding digital audio products. It includes a huge range of IP and connectivity options 'out of the box', including: USB Audio Class 2.0 functionality with audio sample rates of up to 384kHz and full 24-bit resolution; Direct Stream Digital; PC and Mac connectivity; and compatibility with current and legacy Apple products in device or host modes.

XMOS also continues its leadership position in the Ethernet AVB market. Visit us at CES for a demonstration of our AVB Daisy-Chain solution, which allows you to create products that don't require a central switch, dramatically cutting the overall cost of AVB networking.

What?

Demonstrations will showcase:

- The MFA reference platform that enables great-sounding products based on USB Audio
- AVB Daisy Chain for low-cost AVB networking
- XMOS xSOFTip components for rapid product development

Where?

XMOS will be at the Venetian Las Vegas, 3355 Las Vegas Blvd South, Las Vegas, NV 89109

How?

For a meeting appointment please contact your Innovatech Sales Engineer or our office at Ryanc@innovatecha.com. We look forward to seeing you there!

Best Regards
Al Serpa
President
